Our bathroom floors have been installed in St. Mary's Hall.

I am glad to report that our accessibility project is now fully underway. The Asbestos abatement has been completed inside the air handler room which will allow a new and more efficient air handler unit to be installed. This should be done sometime in the earlier part of the project. Our air handler has served us well over the years. It is original to the building. I thank Carl Schaefer for his care of this vital piece of equipment over the years. It has lasted us well past its predicted lifespan. Hopefully, the new one will last as long. Not all the doors will be available in the church over the next four months. The emergency door is the one that is down this week, but that will change often during the project. We will always have at least two exits open to follow fire code. This week, the south door (main front entrance) and the north door (the main rear entrance) will be available. The north door will probably only be accessible from the south side following the sidewalk on the outside of the building. I know not everyone is good at directions, so I will also use numbers. The south main door will be door 1, the future fully assessable north door is door 2, and the emergency exit on the west side is door 3. Door 1 and 2 will be operational this Sunday. I appreciate your patience through this. I am excited to see this long-needed project underway.

Blessings,
Marc
